

RUEL B.LAPID

Senior Full Stack Engineer

Apalit, Pampanga, Philippines | ruelblapid@gmail.com | [Portfolio](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 15+ years building multi-tenant SaaS platforms and distributed systems. Deep hands-on expertise in Supabase/PostgreSQL (Row-Level Security, schema design), React, TypeScript, and Node.js, from schema to UI — backed by over a decade of production PHP/Laravel at scale.

AI-first engineer: ships production LLM and OCR pipelines (reducing manual processing by 40%) and builds daily with Claude Code and custom Claude skills, personally reviewing, testing, and owning all shipped code.

Expert in cloud-native delivery (GCP/AWS/Vercel), clean architecture (CQRS/DDD), and secure application design (OAuth2/OIDC, RBAC), translating business goals into resilient, auditable end-to-end systems.

CORE TECHNICAL SKILLS

- **BACKEND:** PHP (Laravel), Python (FastAPI), Node.js (Fastify), TypeScript, JavaScript, .Net, Java.
- **FRONTEND:** Vue.js (2/3), State Management (Pinia/Vuex), React, Next.js, TypeScript, Tailwind CSS, Leaflet (Geolocation/Mapping).
- **ARCHITECTURE & DATA:** Clean Architecture, DDD, CQRS, Event-Driven Systems, REST/gRPC APIs.
- **DATABASES & SEARCH:** PostgreSQL, Supabase, Prisma ORM, MySQL, Google Spanner, MongoDB, Elasticsearch, BigQuery, Redis, Vertica, VoltDB, Redshift, Snowflake.
- **AI & AUTOMATION:** AI-Assisted Development (Claude Code, Claude Skills), LLM Integration (Claude, Gemini, GPT-4), Prompt Design & Structured Outputs, LangChain, OCR (Tesseract, PaddleOCR), Ollama, Airflow.
- **BI / ANALYTICS:** SQL Reporting, Data Aggregation, Data Analysis.
- **CLOUD & DEVOPS:** GCP, AWS, Vercel, Docker, Kubernetes (GKE), CI/CD.
- **IAM & SECURITY:** Keycloak, Okta, OAuth2, OIDC, RBAC.

PROFESSIONAL EXPERIENCE

Full Stack Engineer | Independent / Freelance, AnchorTagPro | *May 2026 – Jun 2026*

- **Automation:** Designed a scheduled cloud job (Vercel Cron) that scans records nightly, detects items crossing a due/expiry threshold, and automatically dispatches status notification emails, eliminating fully manual compliance tracking.
- **Architecture:** Architected a custom CQRS + Domain-Driven Design backend (command/query buses, DI container) so every action runs through a consistent, auditable pipeline across 10+ business domains.
- **Dashboard:** Built a role-based dashboard (Admin, Client, Inspector, Public) with live status reporting, audit/activity logs, and on-demand PDF/Excel report generation.
- **Multi-Tenancy & Security:** Modeled a multi-tenant schema on Supabase (PostgreSQL) with Prisma ORM, Redis caching, and Postgres Row-Level Security, enforcing strict tenant data isolation at the database layer.
- **Geolocation & Spatial Mapping:** Built interactive site mapping with Leaflet: geocoded building locations on live maps and an indoor positioning layer plotting NFC/anchor tag coordinates onto building blueprints.
- **AI-Assisted Delivery:** Accelerated end-to-end delivery using Claude Code as a primary development tool, scaffolding CQRS handlers, generating migration scripts, and drafting UI components. All AI-generated code was reviewed, tested, and hardened before merge.

Senior Full Stack Engineer | Novapulsar, Tampa, Florida, US | *Jan 2025 – Jan 2026*

- **Data Intelligence:** Owned design and development of document processing systems, integrating OCR and LLM classification to transform raw documents into structured, searchable datasets; reduced manual workflows by 40% and processing time by 35%.
- **Data Storage & Search:** Indexed and stored structured data across Elasticsearch, MongoDB, and Google Spanner to support fast querying and analytics at scale.
- **Backend & Pipelines:** Built scalable backend services and asynchronous ingestion pipelines (Celery) to process high-volume workloads; deployed on Kubernetes (GKE) via CI/CD.
- **Full Stack:** Delivered document workflow UIs in Vue 3 and React integrated with multi-tenant APIs for contract and invoice management.

Principal Engineer (IAM / Full Stack) | Premion, New York, New York, US | *Mar 2024 – Jan 2025*

- **Architecture & Identity:** Defined backend architecture and technical direction for high-traffic media platforms; implemented authentication and authorization using Keycloak and Okta (OAuth2/OIDC).
- **Frontend Integration:** Integrated secure backend APIs with Vue.js frontends; created a reusable authorization library in TypeScript to standardize RBAC across internal tools.
- **Performance & Quality:** Migrated legacy APIs to TypeScript on Node.js (Fastify), improving code quality and maintainability; diagnosed and resolved performance bottlenecks across APIs and databases.
- **Leadership:** Provided technical guidance and contributed to engineering best practices; aligned technical delivery with business goals across cross-functional teams.

Senior Full Stack / Backend Engineer | Route4Me, Tampa, Florida, US | *Nov 2017 – Mar 2024*

- **Marketplace & Billing:** Led and built the Marketplace, Billing, and Checkout systems for a high-scale SaaS platform, including a Laravel subscription engine handling high-volume transactions, resulting in a 25% increase in automated renewals.
- **Entitlement & Add-ons:** Designed and implemented RESTful APIs (MVC) for add-on and feature management, including enable/disable subscription logic and entitlement enforcement.
- **Full Stack:** Built responsive Billing, Checkout, and Marketplace UI pages end-to-end in collaboration with Vue.js frontend developers; optimized database performance through query tuning, indexing, and caching.
- **Data Insights:** Integrated BigQuery with interactive BI dashboards to provide stakeholders with real-time visibility into routing patterns and billing health.

Engineering Manager / Senior Developer | Airpush, Los Angeles, California, US | *Jun 2011 – Oct 2017*

- **Scale:** Built and scaled a real-time AdTech platform handling petabyte-scale data and millions of events, growing platform revenue from \$10k/day to \$1M/day.
- **Efficiency:** Reduced ad-serving latency from 1s to 50–150ms by optimizing core PHP ad delivery services, low-latency data stores (VoltDB/Vertica), and asynchronous processing pipelines (ZeroMQ).
- **Data Engineering:** Designed high-throughput data ingestion and analytics pipelines (ETL) processing millions of events; built internal tools and intranet systems using PHP, CodeIgniter, and jQuery.
- **Leadership:** Managed a team of 5 engineers while maintaining 99.99% uptime across all production systems.

Senior Backend / Android Developer | Golive! Mobile, Denver, Colorado, US | *Jun 2010 – Jun 2011*

- Developed Android applications and backend services; built SMS processing and automation workflows with third-party API integrations for high-engagement messaging systems.
- Managed full application lifecycle from development through deployment.

Senior .NET / PHP Developer | GoWireless, Raleigh, North Carolina, US | *May 2007 – May 2010*

- Delivered enterprise and e-commerce applications, dashboards, admin panels, and automation tools using PHP and .NET in a multi-client consultancy environment.
- Built reusable CMS-like components, routing systems, and C# automation tools for network provisioning and device configuration.

KEY ACHIEVEMENTS

- **AI Transformation:** Successfully transitioned legacy manual data entry to AI-powered extraction, saving thousands of man-hours.
- **System Reliability:** Consistently maintained 99.99% uptime for high-traffic platforms while reducing infrastructure costs by 15% through better resource orchestration.
